

EnergieRevolte, a subsidiary of Stadtwerke Düren, offers its customers pre-paid power supply – on a daily basis, transparent and automated.

Our collaboration

Thanks to the collaboration with Commerzbank, EnergieRevolte is able to transmit status messages of incoming payments and summaries every hour. This enables Germany's first prepaid power supplier to process payments directly in the customer workflow. That makes payment transactions simpler, leaner and safer.

API solution: Corporate Payments API

- API allows corporate and small businesses to transfer payments and collect account information directly from your own cash management system.
- Payment orders are submitted in the company's own ERP/cash management system.
- This API provides approval of payment transaction order on bank server.

USE CASE
